SUBJECT INDEX

The subject index conforms to the cateogires established in the OR/MS Index, 1952–1976, 1976–1981, and 1982–1987. The 1952–1976 cumulative index was compiled by Kneale T. Marshall and F. Russell Richards, the 1976–1981 cumulative index was compiled by Jon W. Tolle and Richard E. Stone, and the 1982–1987 cumulative index was compiled by Jon W. Tolle.

A

Agriculture/food
Garille, S. G., human diet, 1–13.
Algorithm
Cai, X., Generalized Benders Decomposition, 235–245.
Feng, Y., bisection method, 790–795.
Analysis of algorithms
Kaminsky, P., probabilistic analysis, 293–304.

C

Communications
Koole, Ger, transmission policies for noisy channels, 892–899.
Liu, Z., cell dropping with finite buffers, 66–78.
Wasserman, Kimberly M., power control in wireless networks, 700–709.
Complementary programming
Boucher, Jacqueline, models of restructured electricity systems, 821–838.
Computer science
Gondzio, Jacek, high-performance computing, 879–891.
Cost analysis
Kenyon, Chris, opportunity cost of idle time, 675–689.

D

Decision analylsis, multiple criteria
Carrizosa, E., 169–174.
Forman, Ernest H., 469–486.
Lahdelma, Risto, 444–454.
Dynamic programming
George Jennifer M., service rate control in queues, 720–731.
Dynamic programming, applications
Hsu, Vernon, Solving economic lot size problems, 316–321.
Dynamic programming: heuristics
Secomandi, Nicola, Network/graphs: stochastic model, 796–802.
Dynamic programming/optimal control, applications
Feng, Youyi, optimal seat inventory control, 938–949.
Koole, Ger, models scheduling with partial information, 892–899.
Tragler, Gernot, application to drug policy, 352–362.
Dynamic programming/optimal control, Markov
Kleywegt, A. J., resources allocation, 26–41.
Dynamic programming/optimization control
Kamrad, Bardia, applications, 690–699.
Dynamic programming, Markov, infinite state
Philbrick, C. Russell Jr., efficient approximation of cost-to-go functions, 398–412

E

Economics
Boucher, Jacqueline, equilibrium models of restructured electricity systems, 821–838.
Effectiveness/performance
Post, Thierry, DEA, stochastic dominance, mean-variance analysis, 281–292.
Electric industries
Boucher, Jacqueline, equivalence between restructuring models, 821–838.
Engineering
Bollapragada, S., structural design, 42–51.

F

Facilities
Carrizosa, Emilio, continuous location/discrete location,169–174.
Finance
Bertsimas, Dimitris, derivatives, pricing and hedging, 372–397.
Kamrad, Bardia, options, investments, capital budgeting, 690–699.
Finance/asset pricing
Glasserman, Paul, computational methods, 923–937.
Finance/capital budgets
Meier, Helga, scenario-based optimization for capital budgeting, 196–206.
Finance/investment
Gondzio, Jacek, asset-liability management models, 879–891.
Finance/portfolio
Meier, Helga, optimal portfolios for capital budgeting, 196–206.
Finance/securities
Kenyon, Chris, real options, 675–689.
Flow shop
Kaminsky, Philip, weighted completion time problem, shortest processing time dispatch rule, 293–304.

G

Games/group decisions
Mahajan, Siddharth, noncooperative, 646–657.
Cachon, Gérard P., noncooperative, 658–674.
Government, energy policies
Gabriel, S. A., general framework for determining energy policies, 14–25.

H

Heuristics
Balas, Egon, facet enumeration, 207–225.

I

Industries
Karmarkar, Uday, chemical, food, and petrochemical sectors, 271–280.
Marchand, Hugues, cutting planes: valid inequalities and solution for mixed integer programming problems, 363–371.

Industries, petroleum
Kenyon, Chris, offshore drilling, rig leasing, 675–689.

Industries, transportation/shipping
Feng, Youyi, airline route revenue management, 938–949.

Inventory, perishable
Cooper, William L., heuristics, performance bounds, stochastic, 455–466.

Inventory/production
Aviv, Yossi, multi-item/echelon/stage, 578–598.
Aviv, Yossi, operating characteristics, forecasting, 578–598.
Bertsimas, D., multi-item,make-to-stock systems, 119–133.
Kamrad, Bardia, Policies and uncertainty, 690–699.
Cachon, Gérard P., multi-echelon, stochastic demand, periodic review heuristic,79–98.
Cachon, Gérard P., multi-echelon stochastic demand, 658–674.
Chen, Fangruo, multi-echelon, marketing/pricing policies, 839–853.
Chen, Jinfa, multiple sourcing, optimal replenishment, inspection, rework, 430–443.
Corbett, J. Charles, asymmetric information supply chains, 487–500.
Feng, Y., continuous review, 790–795.
Hsu, V., perishable/aging: ECS problems with holding and backorder costs, 316–321.
Kamrad, Bardia, policies and uncertainty, 690–699.
Mahajan, Siddharth, consumer substitution, 334–351.
Mahajan, Siddharth, policies-marketing/pricing, 646–657.
Markowitz, David M., dynamic lot-sizing. Production/scheduling: sequencing jobs with due dates, 246–270.
Sobel, M., deterministic and stochastic demand; contract, optimal policy,157–162.
Webster, S., smoothing, 99–106.

Inventory/production, multi-echelon
Cachon, Gérard P., multiechelon stochastic demand, 658–674.
Chen, Fangruo, multi-echelon, Markov-modulated infinite horizon, optimal policy, 226–234.
Chen, Fangruo, marketing/pricing policies, 839–853.
Chen, Jinfa, multiple sourcing, optimal replenishment, inspection, rework, 430–443.

J

Judicial/legal
Tragler, Gernot, crime and drug policy, 352–362.

M

Manufacturing
Webster, S., performance/productivity, 99–106.

Manufacturing/automated systems
Dobson, G., batch processors in semiconductor, steel and ceramic industries, 52–65.

Manufacturing productivity
Karmarkar, U., optimizing cost and conformance quality, 271–280.

Marketing
Chen, Fangruo, channels of distribution, retailing, pricing, 839–853.

Marketing buyer behavior
Mahajan, Siddharth, 646–657.

Marketing/ choice models
Mahajan, Siddharth, choice and inventory decisions, 334–351.

Military, search/surveillance
Anderson, E. J., marking strategies on the geometric plane, 107–118.

N

Natural resources
Cai, Ximing, water resources management modeling, 235–245.
Philbrick, C. Russell, Jr., water resources: optimal reservoir operations, 398–412.

Network/graphs
Ahuja, Ravindra K., flow algorithms inverse shortest path, minimun cut, minimum cost flows, 771–789.
Guerriero, Francesca, algorithms for the K shortest paths problem, 423–429.
Jaillet, Patrick, distance algorithms online searching, 501–515.

O

Optimization
Karabati, Selcuk, integer optimization, min-max optimization, robust optimization, 913–922.

Organization
Cooper, William W., employee performance evaluation, 807–820.

P

Philosophy of modeling
Meredith, Jack R., understanding vs. problem solving, 325–333.

Probability
Bartholdi, John J. III, stochastic model/applications: stochastic model of bucket brigade, 710–719.
Juneja, Sandeep, Markov processes, 900–912.

Probability/applications
Liu, Z., ATM networks, cell dropping, 66–78.

Production planning
Karmarkar, Uday, blending and grading in process industries, 271–280.

Production/scheduling
Hall, N., experimental data for testing algorithms and heuristics, 854–865.
Hall, N., scheduling with fixed delivery dates, 134–144.
Kaminsky, Philip, multiple machine sequencing. 293–304.
Markowitz, David M., sequencing jobs with due dates, 246–270.
Naphade, Kedar, melt scheduling problem, 629–645.
Production/scheduling, approximations/heuristic
Dobson, G., batch processors, 52–65.
Production/scheduling, cutting stock
Kleywegt, A. J., dynamic stock cutting, 26–41.
Production/scheduling, lot sizing
Teo, Chung-Piaw, programming/integer: randomized rounding, 599–608.
Production/scheduling, planning
Hsu, V., lot sizing models over a finite horizon, 316–321.
Production/scheduling, sequencing stochastic
Gilland, Wendell G., priority sequencing in a multistation closed network, 759–770.
Crès, Hervé, probabilistic sequencing, random priority, 565–577.
Production/stochastic
Bartholdi, John J. III, bucket brigade order picking, 710–719.
Professional OR/MS implementation
Naphade, Kedar S., 629–645.
Professional OR/MS philosophy
Meredith, Jack, R., ontological basis of OR/MS, 325–333.
Programming
Henz, M., constraint, 163–168.
Programming, integer
Balas, Egon, pure 0-1 programming.
Marchand, Hugues, cutting planes: valid inequalities and solution for mixed integer programming problems, 363–371.
Romeijn, H. Edwin, generalized assignment problem, 866–878.
Programming integer, heuristic
Naphade, Kedar S., problem space search, 629–645.
Programming, integer, nonlinear
Bollapragada, S., logic-based method, 42–51.
Programming, integer, theory
Lougee-Heimer, R., coefficient adjustment using special ordered sets; cutting planes; continuous relaxation, 175–177.
Meier, Helga, solution of 0-1 integer programming by Lagrangian decomposition and composite relaxation, 196–206.
Programming, linear
Ahuja, Ravindra K., inverse linear programming problems, 771–783.
Cooper, William W., applications —algorithms, 807–820.
Helmes, Kurt, application of linear programming, 516–530.
Programming, mathematical
Karabati, Selcuk, nonlinear integer programming, 913–922.
Programming, mathematical, complementarity
Gabriel, S. A., energy-economic application for the nonlinear complementarity problem, 14–25.
Programming, nonlinear
Cai, Ximing, nonconvexivity in large nonlinear models, 235–245.
Programming, stochastic
Philbrick, C. Russell Jr., algorithms, 398–412.
Gondzio, Jacek, decomposition methods for stochastic programming, 879–891.

Q

Queues
Markowitz, D., diffusion models of scheduling problems, 246–270.
Nam, Ick-Hyun, dynamic scheduling for a queueing network using Brownian approximation, 305–315.
Queues/applications
Liu, Z., G/D/1 queues with finite buffers, 66–78.
Queues/approximations
Bertsimas, Dimitris, large deviations, fluid models, 119–133.
Queues/dynamic control
George, Jennifer M., Dynamic programming: service rate control in queues, 720–731.
Queues/multichannel
Wasserman, Kimberly M., optimal control of dependent servers, 700–709.
Queues/networks
Gilland, Wendell G., scheduling rules based on approximate Brownian models, 759–770.
Queues/optimization
Glazebrook, Kevin D., multiclass queues, parallel servers, 609–623.
Wasserman, Kimberly M., parallel queues with parallel dependent servers, 700–709.
Queues/priority
Drekic, S., flow times in preemptive-repeat different queues with three methods to reduce customer delay, 145–156.

R

Recreation and sports
Henz, M., tournament scheduling, 163–168.
Resource allocation
Karabati, Selcuk, min-max-sum resource allocation, 913–922.

S

Sequencing, deterministic
Hall, N., algorithms and complexity results, 134–144.
Service systems, staffing
Green, Linda V., use of queueing models, 549–564.

Simulation, design of experiments
Nelson, Barry L., two-stage procedures, 950–963.
Wilson, James R., selection and multiple comparison procedures, 964–966.
Simulation, efficiency
Glasserman, Paul, variance reduction, 923–937.
Simulation, random variable generation
Hall, Nicholas G., methods for generating random data, 854–865.
Simulation, statistical analysis
Chick, Stephen E., input distribution selection, uncertainty analysis, 744–758.
Chick, Stephen E., selecting the best simulated system, 732–743.
Juneja, Sandeep, importance sampling, 900–912.
Munoz, David F., multivariate steady-state output analysis, 413–422.
Nelson, Barry L., finding the best alternative, 950–963.
Statistics
Ahuja, Ravindra K., data analysis: isotonic regression problem, 784–789.
Barnett, A., design of experiments, 181–195.
Nelson, Barry L., design of experiments, 950–963.
Romeijn, H. Edwin, generation of random data, 866–878.
Statistics, Bayesian
Chick, Stephen E., Bayesian inference for ranking and selection, 732–743.
Chick, Stephen E., model selection, prior distribution assessment, 744–758.
Stochastic models
Feng Y., Poisson demand and random discount offers, 790–795.

T

Telecommunications
Cooper, William W., performance evaluation, 807–820.
Transportation, air, cost analysis
Barnett, A., system safety, 181–195.
Transportation, mass transit
Ahuja, Ravindra K., toll pricing in mass transportation networks, 771–789.
Transportation, scheduling
Kleywegt, A. J., load acceptance dispatching, 26–41.
Transportation, scheduling vehicles
Cordeau, Jean-François, assignment of locomotives and cars, 531–548.
Transportation vehicle routing
Secomandi, Nicola, dynamic and stochastic model, 796–802.

U

Utility theory
Post, Thierry, DEA, stochastic dominance, mean-variance analysis, 281–292.
